

Śruby pasowane

Stal/stal nierdzewna, z kołnierzem

SPECYFIKACJA

Wersja ze stali

- Wytrzymałość na rozciąganie klasa 12.9
- Powierzchnia oksydowana na czarno
- Część walcowa o średnicy d_1 szlifowana

Wersja ze stali nierdzewnej NI

- AISI 304 (A2)
- Część walcowa o średnicy d_1 szlifowana

INFORMACJE

Śruby pasowane ISO 7379 to ekonomiczne elementy konstrukcyjne do szerokiego zastosowania.

Maksymalny moment dokręcania nie jest definiowany klasą wytrzymałości materiału (12.9), lecz jest ograniczony małą powierzchnią oporową tba śruby oraz podtoczeniami pomiędzy średnicami d_1 , d_2 i d_3 .

Odchyłki od standardu ISO:

- Brak informacji odnośnie koncentryczności elementów opisanych w normie tolerancjami 2 IT 13 oraz 2 IT 10
- Oficjalna norma ISO zawiera następujące wymiary dla d_1 - d_2 : 6.5-M5 / 13-M10 / 25-M20
- Rozmiary 4-M3 oraz M4-M5 nie są ujęte w oficjalnej normie ISO

DANE TECHNICZNE

- Właściwości stali nierdzewnej (patrz strona A26)
- ISO-Podstawowe tolerancje (patrz strona A21)
- Dane dotyczące wytrzymałości śrub (patrz strona A20)
